**WELL INVESTIGATION PROGRAM—SUMP/CLARIFIER REMOVAL IN FORMER
BUILDING 2 , 1200 S. FLOWER ST., BURBANK, CA., (FILE NO. 109.0582)**

Reference is made to your consultant's, Environ, letter dated April 26, 1995, containing information on future site assessment activities for the subject site. Your consultant proposes to remove a sump/clarifier which was encountered during the implementation of the work plan for Additional Subsurface Investigation Activities, Building 2. We have reviewed the proposal and information obtained up to date and have no objections to it's implementation provided that all work is completed according to the previously approved work plan, complies with all Regional Board subsurface investigation requirements and complies with the following site specific modifications:

1. Your consultant indicates that up to 12 soil samples will be collected from the sidewalls and bottom of the excavation. Soil samples must be collected as deep as possible in five foot increments, but not more than 10 feet, from the bottom of sump/clarifier excavation location.
2. All soil samples submitted for chemical analysis must comply with this Regional Board's "Laboratory Requirements for Soil and Water Sample Analyses."

Subsequent to completion of the field activities, three copies of a technical report containing the results of the sump/clarifier removal must be submitted to this Regional Board.

Please notify Board Staff at least 72 hours in advance before commencing any field activities, so we may schedule a representative to be present.

Ms. Olmsted
